MOEEZ AHMED SHAH

Senior Game Developer and Project Lead | Unreal Engine 5 | Unity | Open-world and multiplayer systems

Karachi, Pakistan moeezshah2019@gmail.com +92 345 6179281 linkedin.com/in/moeez-shah-3670091b0
moeez-ahmed.github.io

Summary

Senior game developer and project lead with 5+ years building games and real-time worlds in Unreal Engine 5 and Unity, and 4+ years leading cross-functional teams. I architect open worlds on Lyra and Mass Entity, multiplayer on listen and dedicated servers, and conversational NPCs with NVIDIA ACE and LLM dialogue, while staying hands-on in the code.

Experience

Senior Game Developer and Project Lead, Dabbtech / 101-Dev NASTP

Jan 2026 – Present

Karachi, Pakistan | dabb.co | kandgames.com

- Led four titles end to end: hands-on development plus day-to-day technical guidance for developers and designers.
- **WAHM** (Unreal Engine 5.8): action-stealth game in a long development cycle, with GASP locomotion, authored traversal and crowds.
- **KingdomLand** (Unreal Engine 5 and Unity): Riyadh as a 3D real estate world with API-synced buying, selling, renting and building. In Unreal: World Partition streaming and pooled traffic and NPCs. In Unity: road and footpath editor tools, spline traffic and GPU-instanced buildings.
- **Kick Arena** (Unity): free kicks, target challenges, player customisation and a lucky spin, live on Google Play.
- **Tamr Farm** (Unity): Saudi date-farm game with animals, buildings, timed orders and friends, live on Google Play.

Senior Game Developer, Viral Vind Technologies

Dec 2024 – Jan 2026

Grand Gangsta City and Westland Gangsta | Pakistan, on-site

- **Grand Gangsta City** (UE5): architected modular open-world gameplay and missions on Lyra across a large city.
- Built car deformation, procedural destruction and MetaHuman crowds in the style of City Sample with Mass Entity.
- Voiced NPCs with NVIDIA ACE text to speech, and experimented with a separate LLM for each NPC behaviour.
- Led replication, economy and live ops; optimised streaming, memory and physics for mid-range phones.
- **Westland Gangsta** (Unity): crowd shooter on Google Play with number gates, zombie hordes, bosses and base building.

Core skills

Engines
Unreal Engine 5 and 4.27 (C++, Blueprints), Unity (C#)

Gameplay
Lyra, Gameplay Ability System, GASP and Motion Matching, Mass Entity, City Sample, World Partition

Multiplayer and backend
Replication, listen and dedicated servers, Photon, GameLift, Node.js, REST APIs

AI
NVIDIA ACE for MetaHumans, LLM and ChatGPT dialogue, GOAP, bots and bosses

Physics and performance
Car deformation, procedural fracture, world streaming, GPU instancing, culling, memory optimisation

Architecture
ECS, Observer pattern, MVC, server-client model, SDK and editor tool design

Live ops and economy
In-app purchases, in-game economies, NFT marketplaces, store live ops

Platforms
PC (Steam, Epic), Android, iOS, WebGL, VR

Honours

Employee Spotlight of the Year

ePAGING Private Limited, July 2023

Selected projects

Films, screenshots and case studies at **moeez-ahmed.github.io**

WAHM

Dabbtech | Unreal Engine 5.8

Action-stealth game in a long development cycle: GASP locomotion, traversal and crowds.

Watch the film

KingdomLand

Dabbtech | UE5 and Unity

Riyadh as a 3D real estate world: buy, sell, rent, auction and build, synced live.

Watch the films | kingdomland.net

Grand Gangsta City

Viral Vind | UE5, Lyra

Open-world crime city: car deformation, MetaHuman crowds and NVIDIA ACE voices.

Watch the film

Apes Planet

ePAGING | Unreal Engine 4.27

Multiplayer metaverse with a fighting game, racing, an obstacle run and boss raids.

Watch the film

Kick Arena

Dabbtech | Unity

Free kicks, target challenges and player customisation in themed stadiums.

Google Play | Case study

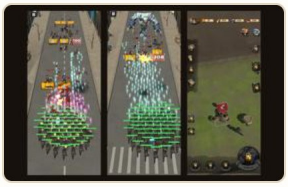

Tamr Farm

Dabbtech | Unity

Saudi date-farm game: palms, camels, farm buildings and timed orders.

Google Play | Case study

Westland Gangsta

Viral Vind | Unity

Crowd shooter: number gates, zombie hordes, bosses and base building.

Google Play | Case study

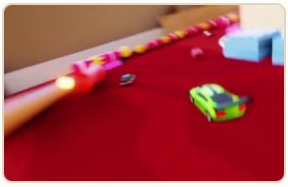

BeeGames

ePAGING | Unity WebGL

Browser multiplayer: Connect Four, rock paper scissors and a dice game.

Watch the film

Crazy Battle

ePAGING | Unity, Photon

Real-time PvP toy-car combat, released as an NFT game on Polygon.

Case study

Caravan of the Sands

Unreal Engine 5 | In development

Desert-fantasy game of camel breeding, waystations and Arabian folklore.

Case study

More projects

Metarebels TrustVerse, a metaverse built for TrustVibes; Arcade AI 3D, a 3D simulation driven by a neural network; plus earlier VR and puzzle games.

Watch the gameplay films

Six films with chapters, plus screenshots and a full case study for every project. Scan the code or visit the site.

Experience, continued

Senior Game Developer, Apes Planet Meta May 2022 – Apr 2025

United Kingdom

- Senior developer on Apes Planet, a spatial-computing metaverse hub in Unreal Engine connecting developers and players.

Team Lead, Game Design and Development, ePAGING Jan 2022 – Nov 2024

Promoted from Unreal Game Developer (Jan 2022) to Senior Game Developer (Aug 2022) and Team Lead (Nov 2022)

- Led a cross-functional team of Unreal, Unity, blockchain and Node.js developers, designers, artists and QA.
- Lead architect of Apes Planet; built a creator SDK for user-generated content and external developers.
- Designed hybrid networking: the world on a listen server, mini-games on dedicated servers, plus region-specific servers.
- Built in-game economies: shops, currencies, a proprietary coin, an NFT marketplace and an in-game exchange.
- Integrated ChatGPT-driven NPCs and AI-assisted missions; built AI bots and boss encounters.
- Optimised Unreal levels with streaming and culling; set optimisation strategy across Unreal and Unity.
- Shipped Unity titles Crazy Battle (Photon PvP car combat) and BeeGames (WebGL multiplayer Connect Four, rock paper scissors and dice).
- Built the Apes Planet multiplayer modes in Unreal Engine 4.27: a Tekken-style fighting game, racing, an obstacle run and MMO-style boss fights.
- Worked with the CEO on fundraising, product direction and client negotiations.

Earlier roles, 2021–2022

- **Game Developer (contract), Lambda GameWorks**, Mar–Apr 2022: portal, bridge and puzzle mechanics for a 3D puzzle game.
- **Software Engineer, Bits Collision**, Nov 2021 – Apr 2022: VR cultural heritage simulation on stitched 360° video.
- **.NET Developer, Tecizeverything**, Sep 2021 – Feb 2022: REST APIs, Amazon MWS and payment integrations, Vue.js and .NET Core.
- **Trainee Engineer, Pakistan Navy NRDI**, Nov 2021 – Jan 2022: research-based software projects.
- **Software Development Intern, GAOTek Inc.**, Sep–Dec 2021: architecture, Scrum, testing and documentation.

Education

BE Computer Software Engineering

Bahria University, Karachi

2018 – 2022 | CGPA 3.8 / 4.0

Certifications

Introduction to Game Design
Epic Games, 2024

Mathematics for Computer Games Development using Unity
Udemy, 2024

Advanced AI for Games (GOAP)
Holistic3D, 2021

Unity's ECS Optimization System
Holistic3D, 2021

Data Science Foundations and Python for Data Science
IBM, 2021

Creating Virtual Reality Apps
UC San Diego, 2019

Registered Software Engineer
