Moeesh shah

Senior Unreal/Unity Engine Gameplay Architect | Open-World & Multiplayer Systems | AI-Driven Gameplay | Lyra & UE5 Mass
Karachi, Sindh, Pakistan

Summary

Hello everyone! My name is Moeesh Ahmed Shah, and I'm excited to share with you my expertise in game development, metaverse, VR, AR, and XR technologies. With over five years of experience in these fields, I have had the opportunity to work on some incredible projects, both as a team member and as a team lead.

As a game developer, I understand the importance of crafting immersive experiences that engage players in new and exciting ways. Metaverse technology has opened up even more possibilities for creating virtual worlds that blur the line between reality and the digital realm.

In addition to game development, I also have experience working with VR, AR, and XR technologies. These emerging technologies are quickly transforming the way we experience digital content, and I'm thrilled to be part of this exciting movement.

For the past 4 years, I've been leading a team of developers, including backend, SQA, and modeling teams. As a team lead, I am passionate about creating a supportive and collaborative work environment that allows my team to do their best work. I understand that every member of the team plays a critical role in the success of the project and I make it my priority to empower them and ensure that everyone is working towards a common goal.

I'm constantly striving to stay on the cutting edge of new technologies and trends in order to deliver the best possible results for my clients and partners. Whether you're looking to develop games, create immersive virtual experiences, or leverage VR, AR, and XR in your business, I'm ready to help you achieve your goals.

Thank you for taking the time to read my introduction. I look forward to connecting with like-minded individuals and exploring the endless

possibilities of game development, metaverse, VR, AR, and XR technologies.

Experience

NASTP 101-Dev, KAND Games

Senior Game Developer

January 2026 - Present (10 months)

Karāchi

<https://kandgames.com/>

Grand Gangsta City

Senior Game Developer

December 2024 - January 2026 (1 year 2 months)

Pakistan

Architected modular open-world gameplay systems using UE5 Lyra, enabling scalable crime, racing, and mission mechanics across a large urban environment.

Integrated UE5 City Sample and Mass Entity to deliver large-scale crowd simulation and emergent urban interactions with performance-conscious ECS design.

Designed and optimized procedural destruction and fracture systems, enabling dynamic breaking of environmental assets and vehicles while maintaining mobile and mid-range device performance.

Implemented advanced vehicle damage and physics pipelines, including real-time fracture, breakable components, and gameplay-driven destruction states.

Led multiplayer replication, economy, and live-ops systems, architected for scalability and future metaverse expansion.

Integrated AI-driven NPC interactions using NVIDIA ACE for MetaHumans, enabling real-time conversational characters with expressive animation and speech.

Designed LLM-backed communication systems for dynamic NPC dialogue, mission context awareness, and player-driven interactions.

Optimized memory, world streaming, animation, and physics pipelines to support open-world scale and live service deployment.

Integrated backend systems for Google Play and App Store live operations, monetization, and service updates.

Apes Planet Meta

Senior Game Developer

May 2022 - April 2025 (3 years)

United Kingdom

ePAGING

2 years 11 months

Team Lead Game Designing/Development

November 2022 - November 2024 (2 years 1 month)

As a seasoned Team Lead in the gaming industry, I have successfully managed a large and diverse team of game developers, designers, level designers, blockchain developers, and backend Node.js server developers. My expertise spans both the Unreal Engine, where I optimized levels using techniques like streaming and culling for "Apes Planet." In Unity, I spearheaded projects like "Crazy Battle" (a car game) and "Beecasio" (a casino with WebGL-based mini-games).

My technical proficiency extends to the intricacies of network architecture within the Unreal Engine, where I worked on both listen server and dedicated server approaches. This involved a nuanced understanding of optimizing server-client communication, ensuring a seamless multiplayer experience for players.

I tailored game experiences for diverse regions by implementing specialized game servers. Pioneering an integrated approach with listen and dedicated servers, the main game was strategically hosted on listen server, while dedicated servers were utilized for specific aspects like hosting mini-games within the larger framework, enhancing scalability and player engagement.

My role expanded beyond traditional game development to include groundbreaking initiatives in the realm of Game-Fi (Game Finance). I played a pivotal role in shaping in-game and marketplace economies, introducing a proprietary coin, and implementing advanced AI systems.

Leveraging ChatGPT within the game added a unique layer of interaction and engagement.

Furthermore, I led the creation of an SDK for "Apes Planet," enabling seamless expansion with user-generated content. Managing in-game shops, currency systems, and integration with multiple crypto coins and tokens, I notably implemented an in-game exchange, enhancing player experience with dynamism and immersion.

My role extended to collaborating closely with the CEO, providing valuable insights for fundraising initiatives, and contributing to the strategic direction of the projects.

Senior Game Developer

August 2022 - November 2022 (4 months)

Team lead for Apes Planet project (www.apesplanet.com). Handling all teams associated with it including web development, smart contracts (blockchain), conceptual artists, environment artists, backend server development and integration, SQA, etc.

Furthermore, devising optimization strategies for unreal and unity engines. Managing client negotiations/dealing.

Unreal Game Developer

January 2022 - September 2022 (9 months)

Working on metaverse-related projects. Integration of web 3.0. Streaming of different video types, RTSP, RTMP, Shoutcast, etc. Making mechanics for NFTs, fighting mechanics like Tekken, replication logic of multiplayer, dynamic character selection, minimap logics, Azure Gamelift networking, etc. APIs integration for making all core functionalities dynamic and etc. Creating different complex AI bots, BOSS, missions for making game more interactable, animation sequences and timelines, etc.

Expertise with sequencers and creating professional qualities Cinematic shots. Furthermore, designing music/audio for whole game environment.

Technical team lead Developer: Handling teams of 3D/2D Designers, Level Designing, On chain to Off chain logics, etc.

Lambda GameWorks

Game Developer

March 2022 - April 2022 (2 months)

Working on a portal-like 3D game. Making logics for portals, bridges, puzzle`s, and etc.

Bits Collision

Software Engineer

November 2021 - April 2022 (6 months)

Collaboration for our FYP project; hence an industrial-based solution. VR-based project for simulation of automated cultural heritage. Integration of any form of stitched 360 videos in our project and furthermore making all core functionalities on top of it.

Tecizeeverything

6 months

Junior Dotnet Developer

December 2021 - February 2022 (3 months)

Karāchi, Sindh, Pakistan

Using Amazon MWS (Marketplace Web Services). Doing payment integrations, creation of plugins, and etc.

Migrating on fullstack, Vue.js + Dotnet core.

Working on legacy systems.

Software Developer Dotnet

September 2021 - December 2021 (4 months)

Karāchi, Sindh, Pakistan

Creating REST APIs and integrating Amazon APIs. Defining architecture (MVC, Onion) along with testing methodologies for testing the created APIs. Working on SSMS (SQL), PostgreSQL, and Azure as databases using Entity framework core.

Furthermore, been training newly recruited internees for Dotnet core development.

Pakistan Navy

Trainee Engineer at NRD (R&D Wing)

November 2021 - January 2022 (3 months)

Karāchi, Sindh, Pakistan

Working on research-based projects.

GAOTek Inc.

Software Development Intern

September 2021 - December 2021 (4 months)

Crowdsourcing, SEO, defining the architecture, models, agile principles using SCRUM methodologies, design patterns, and schedule for testing along with proper documentation.

Education

Bahria University

Bachelor of Engineering - BE, Computer Software Engineering · (September 2018 - August 2022)
